Name: _____   Date: _____

2-digit mean scores

Calculate the mean as an average of a set of data

You will need:
• scissors

1 Cut out the 24 cards below.
Shuffle the cards and place them face down on the table, making six rows of four cards.

2 Turn over the cards in the first row. Find the mean score of your cards by:

- finding the total of the four cards
- dividing the total by four.

Example

| 12 | 54 | 15 | 81 |

12 + 54 +15 + 81 = 162

162 ÷ 4 = 40·5

Record your numbers and answers in the grid below.

3 Repeat Step 2 for each of the remaining five rows of cards.

Row	Cards				Total	Mean
Example	12	54	15	81	162	40·5
1						
2						
3						
4						
5						
6						

40	15	20	36	10	60
42	50	12	30	18	54
16	24	45	48	63	56
70	14	28	35	72	81
