Solving word problems: rounding remainders

Solve division problems including answers that involve rounding remainders up or down

Find the answer to each of the word problems. If there is a remainder, think carefully whether it needs to be rounded up or down to fit the question.

<p>a The sandwich stall made 342 sandwiches. They were packed into boxes each containing 4 sandwiches. How many full boxes could be made?</p>	<p>b In one day, 387 people went on the ghost train. Each train holds 6 people. How many times did the train need to run?</p>
<p>c Candy floss costs £4 per bag. 195 bags were sold in one day. How much money was taken?</p>	<p>d The Smythe family has £172 to spend on rides. All rides cost £5. How many rides can they go on?</p>
<p>e The rollercoaster seats 4 people. 141 people are waiting in the queue. How many times does the rollercoaster run before everyone in the queue has had a ride?</p>	<p>f Doughnuts are sold in packs of 6. There are 273 doughnuts to be packaged. How many packs can be made?</p>
